

Scientific Collaboration

International collaboration strengthens scientific and diplomatic relations, increases the impact of discoveries through better distribution of knowledge and creates a sense of shared responsibility for the future. A 2024 report by the US National Science Foundation showed that 755,894 of the 3.4 million total articles published worldwide in 2022 had authors from international institutions.

International coauthorship of science & engineering (S&E) publications for the 15 largest producing regions, countries or economies of S&E publications, 2022
